

BYTECODE JUNIOR

ByteCode Junior is an online algorithm programming contest. The contest tests your skills in Algorithms and Data Structures.

The contest will be on hackerrank platform. The contest link will be given on the day of the event. But make sure that you create a hackerrank account before the contest. Visit www.hackerrank.com to get an idea about the event.

FORMAT

- a. The problem statements will define what the input to your program is and what the output must be.
- b. You are expected to write programs that do the necessary processing / transformation from input to output.
- c. The programs are judged by our online judge (which is an automated checker).
- d. The Judge instantly checks if your program works fine, by testing it with several inputs.
- e. The Judge gives you a response.
- f. The objective is to solve problems and score maximal total points.

List of languages allowed: C, C++, C#, Java, PHP, Perl, Ruby, Python, Haskell, Clojure and Scala.
